Prototype Drowsiness Detection System on Car Based on IOT
This thesis project aims to detect drowsiness while driving, which is often a cause of accidents. In this project, I utilize the HOG algorithm for face detection, as well as the EAR and MAR algorithms to detect signs of drowsiness. The implementation is carried out using the **Python** programming language and a **Raspberry Pi** device.

EXPERIENCE

SINDANGPAKUON VILLAGE OFFICE   Sumedang, ID
Desktop Programmer - Internship   Jun 2020 - Sep 2020

I am currently developing a desktop application for population data collection in the village, with the aim of improving the efficiency of village officials in preparing monthly data reports. Currently, the village still uses a manual method. This project using **Java NetBeans** and **MySQL**.

TELKOMSIGMA   Bandung, ID
Backend Developer - Fulltime   Jun 2022 - Present

Project: New Payment and Revenue Management
I contributed to the reconstruction of the website for processing payments for IndiHome services. Specifically, my responsibilities included developing a backend REST API using **Go**, **Redis**, and **PostgreSQL** technologies, as well as setting up transaction log monitoring with ELK (**Elasticsearch**, **Logstash**, **Kibana**). Additionally, I was in charge of conducting website testing using **JMeter**.

Project: Dashboard Performance for DGS
I contributed to the development of Telkom DGS web revenue analytics. Here, my responsibilities creating backend REST API using **PHP Laravel** and **PostgreSQL** Apart from that, I am also responsible for conducting web testing using **JMeter**.
